

Project Design Phase-II

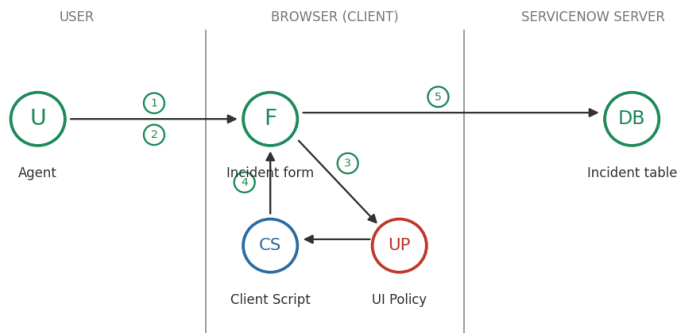

Data Flow Diagram & User Stories

Date	30 September 2026
Team ID	SWTID-2026-9596
Project Name	Implement Client Script and UI Policy (Incident)
Maximum Marks	4 Marks

Data Flow Diagrams:

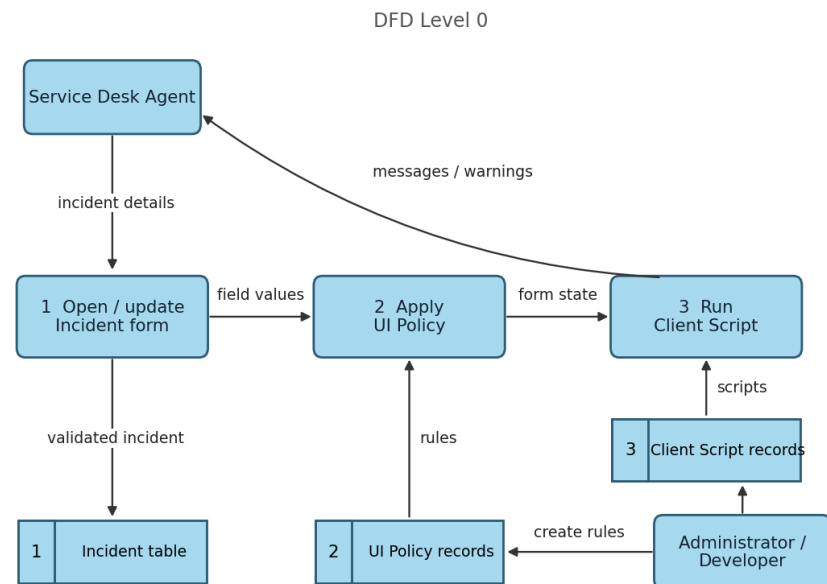

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. For this project, it shows how Incident data moves between the agent, the Incident form, the UI Policy, the Client Script, and the ServiceNow tables. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Example: (Simplified)

1. Agent opens a new Incident form in ServiceNow.
2. Agent selects the Category or Priority and fills the fields.
3. UI Policy checks the condition and shows, hides, or makes fields mandatory.
4. Client Script runs in the browser and shows a message or stops a wrong save.
5. The correct Incident record is saved in the Incident table.

Example: DFD Level 0 (Industry Standard)

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Service Desk Agent (Web user)	UI Policy	USN-1	As an agent, when I select Category as Hardware, the Configuration item field becomes mandatory.	I cannot save the Incident until Configuration item is filled	High	Sprint-1
		USN-2	As an agent, when the State is Resolved, I can see the Close code and Close notes fields as mandatory.	Fields are visible and marked mandatory when State is Resolved	High	Sprint-1
		USN-3	As an agent, I can see the Caller field as read-only after the Incident is saved.	Caller cannot be changed on an existing Incident	Medium	Sprint-2
	Client Script	USN-4	As an agent, when I change the Priority to 1 - Critical, I see a message to inform the Incident Manager.	A field message appears as soon as Priority is changed (onChange)	High	Sprint-1
		USN-5	As an agent, if my Short description is too short, I get a message and the form is not saved.	Form is not submitted if Short description has less than 10 characters (onSubmit)	Medium	Sprint-2
Caller (Self-service user)	UI Policy	USN-6	As a caller, I see only the basic fields on the Incident form, so it is easy to fill.	Internal fields like Assignment group are hidden for the caller	Medium	Sprint-2
	Client Script	USN-7	As a caller, I get a warning if I leave the Description empty.	Warning message shows on load or before submit	Low	Sprint-3
Incident Manager	Client Script	USN-8	As an Incident Manager, I see a clear message on Critical incidents to start the major incident process.	Message appears for Priority 1 only	Medium	Sprint-2
Administrator	Testing and Release	USN-9	As an administrator, I can add the UI Policy and Client Script to an Update Set and move it to production.	All records are in the Update Set and work the same in production	High	Sprint-3
		USN-10	As an administrator, I can test the rules with different roles and browsers.	No errors in the browser console and rules work for all test users	Medium	Sprint-3
