

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	30 September 2026
Team ID	SWTID-2026-9596
Project Name	Implement Client Script and UI Policy (Incident)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	UI Policy on Incident Form	Make fields mandatory based on a condition (e.g. Configuration item for Hardware) Show or hide fields based on Category or State Make fields read-only after the Incident is saved
FR-2	Client Script on Incident Form	onChange script to show a message when Priority is 1 - Critical onSubmit script to stop saving if Short description is too short onLoad script to set a default value or show a form message
FR-3	Testing and Validation	Test the rules on a new and an existing Incident Test with different user roles Check the browser console for script errors
FR-4	Release and Maintenance	Capture all records in an Update Set Move the Update Set to Test and Production Add clear names and comments to each record

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Incident form should be simple and easy for agents. Only the needed fields are shown, and messages are short and clear.
NFR-2	Security	Rules must not show or allow changes to fields that a role should not access. Client-side checks are not enough, so important rules are also enforced on the server side.

FR No.	Non-Functional Requirement	Description
NFR-3	Reliability	UI Policy and Client Script must work the same way every time the form is loaded, changed, or saved, without errors in the console.
NFR-4	Performance	Scripts should be short so the form loads fast. Avoid extra server calls (like GlideRecord) in client scripts.
NFR-5	Availability	The rules must be available at all times with the Incident form, and work after upgrades and in all supported browsers.
NFR-6	Scalability	The same rules should be easy to reuse and extend for other forms or more users, and should work well when many agents use the form at the same time.
