

Functional & Performance Testing Template

Model Performance Test

Date	30 September 2026
Team ID	SWTID-2026-9596
Project Name	Implement Client Script and UI Policy
Maximum Marks	

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Client Script Field Validation (e.g., Short Description, Caller, Priority)	Enter valid and invalid values in form fields; submit the form and check onChange / onSubmit client script	Valid inputs accepted; error message shown and submission blocked for invalid inputs		
FT-02	UI Policy Conditions (e.g., make field mandatory / read-only / visible)	Change the field values (e.g., Priority, Category) so that the UI Policy condition is true and false	Fields become mandatory, read-only or hidden when condition is true and revert when false		
FT-03	Client Script Execution on Form (onLoad / onChange)	Open the form, change field values and check that the script runs (alert, field message, auto-populated value)	Correct action is performed by the client script based on the input		
FT-04	Script and Policy Activation Check	Check that the Client Script and UI Policy are active and applied to the correct table	Both work on the form without console or script errors		

PT-01	Form Response Time Test	Use a timer / browser developer tools to check form load and field-change response time	Should be under 3 seconds		
PT-02	Multiple Field Change Test	Change several fields quickly one after another on the form	Form should not slow down or freeze		
PT-03	Load Test with Multiple Records / Users	Open and submit many records at the same time (multiple users or browser tabs)	Should work smoothly without crashing or delay
