

Ideation Phase

Define the Problem Statements

Date	30 September 2026
Team ID	SWTID-2026-9596
Project Name	Automation and Dynamic Form Validation using ServiceNow Client Scripts and UI Policies
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am: An IT Support Desk Agent / End-user handling high volumes of daily requests inside the organization.

I'm trying to: Quickly fill and submit technical logs like Incident, Change, or Asset requests on the ServiceNow form.

but: The form doesn't check errors instantly, letting wrong data get submitted, or it requires slow full-page server reloads to show simple validation warnings.

because: The system relies heavily on server-side rules or poorly optimized scripts instead of client-side automation rules (Client Scripts & UI Policies).

which makes me feel: Frustrated, slowed down, and prone to introducing human errors into enterprise operational logs.

Problem Statement Matrix

PS-1 (IT Service Desk)	An IT Desk Agent handling critical tickets	Submit severe incident reports immediately to the system	It allows past dates to be picked and does not dynamically highlight VIP user requests	Lack of immediate Client Script validations and UI layout visibility triggers	Anxious about missing SLAs due to incorrect data logs
PS-2 (End User / Employee)	An enterprise employee raising hardware requests	Fill a custom request form without getting confused by irrelevant technical fields	The form displays messy fields that should be dynamic or restricted based on my role	The platform does not have clear UI Policies configured to hide/show field matrices	Confused and annoyed by complex, static layouts
